HySet

The cold weather
concrete

Time
Management

HySet

Designed specifically for cooler weather when a quicker setting time helps to lower placing costs, HySet gives a desirable set and reliable finish times. Slabs set faster for better utilisation of labor in cooler weather.

A product that gives better control over weather conditions, means you can save on overheads and labor costs where slower setting times may delay future work. We've developed HySet to ensure you have better planning and flexibility of your construction when you need it most.

Applications

Inclement weather

On plastic

Undercover

Late starts

Footpaths

Driveways

Council applications

Technical Info

Strength Grade

20MPa+

Standards

AS1379

MSDS

Desirable set and reliable finish times

HySet will give you an advantage in cold weather conditions, with early form removal, greater workability and guaranteed finish times. It is the concrete developed for Winter.

Reduced labor and placement time

Delays due to slow setting times can increase your placing costs by at least 50% and delay future work. HySet eliminates this slow setting time, saving you on overheads.

Better planning and flexibility

When time is an issue and you need better control over weather conditions, HySet achieves a maximum set time of 6 hours. So you can plan with confidence.
