

HySustain[®]

A High Performance Low Carbon Concrete

With the growing demand in low carbon targets, in particular high performance and low carbon; Hymix developed HySustain.

Benefits

A unique and innovative concrete solution that can achieve:

- **Early Age Strength** equivalent to standard post-tensioned concrete
- **Low Carbon Concrete** 30% to 50% reduction in CO₂
- **Lower Shrinkage** than standard concrete – up to 50% improvement
- **Flexural Strength** up to 50% improvement
- **Mix can be tailored to be project specific**
Can be designed to meet the specific sustainability and performance requirements for your project.
- Requires **no additional safety requirements** compared to standard concrete – pump, place and finish within standard WHS requirements.

HySustain supported & validated with project based CO₂ reporting

CO₂ Reporting

- 01 Pre Project**
Helps to understand what the estimated CO₂ for the project could be.
- 02 During Project**
Can help inform decisions on CO₂ consumption during project.
- 03 Post Project**
Provide accurate reporting; on embodied carbon across your project.

EPD

- 01 Project Specific** – produce a project specific EPD
